## Mini Nutritional Assessment® (Summary)

Optimal nutrition is meant to prevent deterioration of mental and physical functions as well as health or treatment complications and to shorten convalescence. The Mini Nutritional Assessment® (MNA®) was developed to detect existing malnutrition or the risk of malnutrition in elderly patients > 65 years. The screening can be performed on an outpatient or inpatient basis. The implementation of the MNA® is recommended by the «European Society for Clinical Nutrition and Metabolism» (ESPEN) for elderly patients [1].

Has food intake declined over the past 3 months due to loss of appetite, digestive problems, chewing or swallowing difficulties?

swallowing difficulties?
○ No decrease in food intake (+2) ○ Moderate decrease in food intake (+1) ○ Severe decrease in
food intake
Weight loss during the last 3 months
$\bigcirc$ No weight loss (+3) $\bigcirc$ Between 1 and 3 kg (2.2 and 6.6 lbs) (+2) $\bigcirc$ Does not know (+1) $\bigcirc$ > 3
kg / 6.6 lbs
Mobility
○ Goes out (+2) ○ Able to get out of bed / chair but does not go out (+1) ○ Bed or chair bound
Has suffered psychological stress or acute disease in the past 3 months?
○ No (+2) ○ Yes
Neuropsychological problems
○ No neuropsychological problems (+2) ○ Mild dementia (+1) ○ Severe dementia or depression
Body Mass Index
$\bigcirc ? 23 \text{ kg/m²} (+3)  \bigcirc 21 \text{ - } 23 \text{ kg/m²} (+2)  \bigcirc 19 \text{ - } 21 \text{ kg/m²} (+1)  \bigcirc < 19 \text{ kg/m²}  \bigcirc \text{ Unknown}$
Calf circumference
$\bigcirc$ ? 31 cm (+3) $\bigcirc$ < 31 cm

:

## Interpretation

Points	Nutritional status	Recommendation
12 - 14	Normal nutritional status	S
8 - 11	Risk for malnutrition	Consider nutrition therapy
? 7	Malnutrition	Nutrition therapy recommended
