

IN A NUTSHELL

The knowledge platform for general practitioners

Nutritional Goal

Adapted from: <https://clinicalnutrition.science/en/>

Optimal nutrition is meant to prevent deterioration of mental and physical functions as well as health or treatment complications and to shorten convalescence. The «Nutritional Risk Screening» (NRS) is suitable for detecting malnutrition. The following calculator can be used to calculate individual protein and caloric goals. The formulas used were tested in the EFFORT study.[1]

Age

years

Sex

Male Female

Body weight

kg ?

Body height

cm ?

Activity factor

Mobile, frequent mobilization (1.4) Partially mobile, occasional mobilization (1.3) Immobile, bedridden (1.2)

Illness factor

Situation	Factor
Elective surgery	1.0 - 1.1
Sepsis	1.0 - 1.4
Hyperthyroidism	1.1 - 2.0
Malabsorption	1.2 - 1.5
Malnutrition	1.3
Burnings	1.4 - 1.5
Polytrauma	1.4 - 2.0

Other factors

Fever +0.1 to +0.2 per degree Celsius

> 75 years -0.1

Ventilation -0.1 to -0.2

Severe renal insufficiency without dialysis

eGFR < 30 ml/min

No Yes

Daily nutrition goal

Basal metabolism

Energy requirement

Protein requirement
